Claims in the application are 1-30.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 2, drawn to a material comprising a porous substrate comprised of a polymer and a functional additive and having a surface with a region defined by some of the functional additive, and a biological or chemical moiety covalently or non-covalently bound to the region, classified in class 435, subclass 180.
- II. Claims 3-25 and 28-30 drawn to a material comprised of a porous substrate and a functional additive and having a surface with a region defined by some of the functional additive, a spacer covalently bound to the region, and a biological or chemical moiety covalently or non-covalently bound to the a spacer, and to a method of providing the material, classified in class 435, subclass 181.
 - III. Claims 26 and 27, drawn to a method of controlling the functionalization of a sintered polyolefin substrate by sintering a mixture of polyolefin particles and functional additive particles having functional groups wherein the functional additive in the mixture is approximately proportional to the density of functional groups on a surface of the sintered polyolefin substrate, classified in class 435, subclass 174.

The inventions are distinct, each from the other because:

20

The invention of Groups I, II and III can each be carried out without performing the invention of any other group to provide a different end result from any other group. Groups I and III do not require a spacer as required by Group II. Groups I and II do not require a method of controlling functionalization of a sintered polyolefin substrate as required Group III. Group III does not require a biological or chemical moiety as required by Group I. Group II does not require a material containing a biological or chemical moiety bound to a region of a surface without a spacer as in Group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application.

Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M. Naff whose telephone number is (703) 308-0520. The examiner can normally be reached on
